By G. D. McBain

## Theory of Lift: Introductory Computational Aerodynamics in MATLAB/Octave By G. D. McBain

Starting from a basic knowledge of mathematics and mechanics gained in standard foundation classes, *Theory of Lift: Introductory Computational Aerodynamics in MATLAB/Octave* takes the reader conceptually through from the fundamental mechanics of lift to the stage of actually being able to make practical calculations and predictions of the coefficient of lift for realistic wing profile and planform geometries.

The classical framework and methods of aerodynamics are covered in detail and the reader is shown how they may be used to develop simple yet powerful MATLAB or Octave programs that accurately predict and visualise the dynamics of real wing shapes, using lumped vortex, panel, and vortex lattice methods.

This book contains all the mathematical development and formulae required in standard incompressible aerodynamics as well as dozens of small but complete working programs which can be put to use immediately using either the popular MATLAB or free Octave computational modelling packages.

### Key features:

- Synthesizes the classical foundations of aerodynamics with hands-on computation, emphasizing interactivity and visualization.
- Includes complete source code for all programs, all listings having been tested for compatibility with both MATLAB and Octave.
- Companion website ([www.wiley.com/go/mcbain](http://www.wiley.com/go/mcbain)) hosting codes and solutions.

*Theory of Lift: Introductory Computational Aerodynamics in MATLAB/Octave* is an introductory text for graduate and senior undergraduate students on aeronautical and aerospace engineering courses and also forms a valuable reference for engineers and designers.

### Editorial Review

#### Review

“This book is a very useful digest of key points from the literature, carefully structured and presented with helpful pointers as to how the successive aerodynamical models can be implemented in the ‘now so readily available interactive matrix computation systems.’” (*Aeronautical Journal*, 1 August 2013)

#### About the Author

#### Dr. Geordie Drummond McBain, Australia

Geordie McBain is an engineering consultant based in Sydney, Australia. In 1995 he graduated top of his class from James Cook University with first class honours in mechanical engineering, earning him the Faculty Medal, and went on to receive his PhD there in 1999. In 2002 he was awarded a Sesquicentennial Postdoctoral Fellowship at the University of Sydney, researching fluid dynamics. During this period, he taught aerodynamics to students on the Aeronautical and Aerospace Engineering degree programmes.

## **Users Review**

### **From reader reviews:**

#### **Jose Carr:**

Why don't make it to become your habit? Right now, try to prepare your time to do the important action, like looking for your favorite reserve and reading a e-book. Beside you can solve your condition; you can add your knowledge by the book entitled Theory of Lift: Introductory Computational Aerodynamics in MATLAB/Octave. Try to make the book Theory of Lift: Introductory Computational Aerodynamics in MATLAB/Octave as your close friend. It means that it can to become your friend when you feel alone and beside that course make you smarter than in the past. Yeah, it is very fortuned to suit your needs. The book makes you far more confidence because you can know everything by the book. So , let's make new experience and knowledge with this book.

#### **Douglas Holmes:**

Throughout other case, little persons like to read book Theory of Lift: Introductory Computational Aerodynamics in MATLAB/Octave. You can choose the best book if you want reading a book. Providing we know about how is important a new book Theory of Lift: Introductory Computational Aerodynamics in MATLAB/Octave. You can add know-how and of course you can around the world with a book. Absolutely right, due to the fact from book you can know everything! From your country until foreign or abroad you may be known. About simple issue until wonderful thing you can know that. In this era, we could open a book or searching by internet system. It is called e-book. You should use it when you feel uninterested to go to the library. Let's go through.

#### **Randy Caldera:**

Reading a guide can be one of a lot of activity that everyone in the world adores. Do you like reading book therefore. There are a lot of reasons why people love it. First reading a guide will give you a lot of new information. When you read a book you will get new information due to the fact book is one of several ways to share the information or perhaps their idea. Second, examining a book will make anyone more imaginative. When you reading a book especially fiction book the author will bring you to definitely imagine the story how the figures do it anything. Third, you could share your knowledge to other people. When you read this Theory of Lift: Introductory Computational Aerodynamics in MATLAB/Octave, you may tells your family, friends along with soon about yours book. Your knowledge can inspire others, make them reading a book.

#### **Denise Wallis:**

Reading a publication make you to get more knowledge from that. You can take knowledge and information originating from a book. Book is published or printed or outlined from each source in which filled update of news. In this particular modern era like now, many ways to get information are available for you. From media social similar to newspaper, magazines, science publication, encyclopedia, reference book, fresh and comic. You can add your understanding by that book. Isn't it time to spend your spare time to spread out

your book? Or just seeking the Theory of Lift: Introductory Computational Aerodynamics in MATLAB/Octave when you required it?
