Using Statistics to Make Educational Decisions By David E. Tanner

Government scrutiny and intensified oversight have dramatically changed the landscape of education in recent years. Observers want to know how schools compare, which district is best, which states are spending the most per student on education, whether reforms are making a difference, and why so many students are failing. Some of these questions require technical answers that educators historically redirected to outside experts, but the questions leveled at all educators have become so acute and persistent that they can no longer be outsourced. This text helps educators develop the tools and the conceptual understanding needed to provide definitive answers to difficult statistical questions facing education today.

Editorial Review

Review

The content is very specific to my design for the course. The book addresses a wide range of prior content affiliation by the student. It reads very well but still provides necessary mathematical rigor for understading the concepts presented...extremely appropriate for most EdD programs and could also function as an excellent transistion from a mathematics, statistical background into the world of research in the social sciences.--Benjamin Brown (10/28/2011)

This text seems to cover the basics of educational decision making. It would make an excellent text for a course preceding the one I am teaching. --Mack C. Shelley"

About the Author

David Tanner is a Professor in the Department of Educational Research and Administration at California State University, Fresno, where he was the Department Chair from 1990-1995. He received his Ph.D. in Curriculum and Instruction/Measurement from Texas A&M University, and his areas of interest include educational psychology; statistics and measurement; educational research; quantitative and qualitative evaluation; assessing student achievement; evaluating classroom assessment instruments; and evaluating the performance of teachers and teacher candidates. He has authored several journal articles and the textbook *Assessing Academic Achievement* (©2001).

Users Review

From reader reviews:

Betty Williams:

Inside other case, little people like to read book Using Statistics to Make Educational Decisions. You can choose the best book if you love reading a book. As long as we know about how is important a new book Using Statistics to Make Educational Decisions. You can add understanding and of course you can around the world with a book. Absolutely right, simply because from book you can realize everything! From your country until foreign or abroad you will be known. About simple thing until wonderful thing you can know that. In this era, we can open a book or searching by internet gadget. It is called e-book. You should use it when you feel uninterested to go to the library. Let's examine.

Rex Pelkey:

Playing with family inside a park, coming to see the ocean world or hanging out with buddies is thing that usually you could have done when you have spare time, in that case why you don't try thing that really opposite from that. A single activity that make you not experience tired but still relaxing, trilling like on roller coaster you have been ride on and with addition of knowledge. Even you love Using Statistics to Make Educational Decisions, you could enjoy both. It is very good combination right, you still wish to miss it? What kind of hang type is it? Oh come on its mind hangout men. What? Still don't buy it, oh come on its referred to as reading friends.

Denita Lumley:

This Using Statistics to Make Educational Decisions is completely new way for you who has attention to look for some information since it relief your hunger of information. Getting deeper you on it getting knowledge more you know or else you who still having bit of digest in reading this Using Statistics to Make Educational Decisions can be the light food for you because the information inside that book is easy to get by anyone. These books build itself in the form that is certainly reachable by anyone, yeah I mean in the e-book type. People who think that in reserve form make them feel tired even dizzy this e-book is the answer. So there is absolutely no in reading a book especially this one. You can find what you are looking for. It should be here for you. So , don't miss the idea! Just read this e-book style for your better life and knowledge.

Robert Russell:

A lot of book has printed but it is unique. You can get it by web on social media. You can choose the best book for you, science, witty, novel, or whatever by searching from it. It is known as of book Using Statistics to Make Educational Decisions. You can contribute your knowledge by it. Without leaving behind the printed book, it may add your knowledge and make an individual happier to read. It is most important that, you must aware about publication. It can bring you from one destination for a other place.
