**Mammal Species of the World : A Taxonomic and Geographic Reference, 2-volume set** From Brand: Johns Hopkins University Press

Wilson and Reeder's *Mammal Species of the World* is the classic reference book on the taxonomic classification and distribution of the more than 5400 species of mammals that exist today. The third edition includes detailed information on nomenclature and, for the first time, common names. Each concise entry covers type locality, distribution, synonyms, and major reference sources. The systematic arrangement of information indicates evolutionary relationships at both the ordinal and the family level. This indispensable reference work belongs in public and academic libraries throughout the world and on the shelf of every biologist who works with mammals.

## **Editorial Review**

### Review

A uniquely valuable compendium of taxonomic and distributional data on the world's living and historically extinct mammalian species. Contributors and editors alike deserve the thanks of all mammalogists for helping to forge the nomenclatural mesh that holds our science together.

*(Journal of Mammalogy)*

To refer to this work as a checklist undervalues it and does not give sufficient credit to the authors and editors for their meticulous efforts in its production. A valuable reference work and a vital tool, particularly for researchers.

*(Journal of Natural History)*

By far the most convenient source for finding the correct scientific name of any mammal and should be on the reference shelf of libraries striving to have useful science sections.

*(Science Books and Films)*

The editors and authors are to be congratulated for undertaking such an outstanding and authoritative work, and it should serve as a standard reference for mammalian species taxonomy for many years to come.

*(Journal of Mammalian Evolution)*

The third edition adds to its reputation as an outstanding and authoritative work.

*(National Museum of Natural History Weekly Update & Forecast)*

Impressive and elegant work.

*(G. R. Seamons Reference Reviews)*

A landmark reference. By far the most authoritative and extensive compilation of the world's mammal species.

*(Ronald Nowak, author, Walker's Mammals of the World, 4th, 5th, and 6th editions)*

A must-have text for any professional mammalogist, and a useful and authoritative reference for scientists and students in other disciplines.

(*Southeastern Naturalist*)

A magnificent work important to anyone seriously interested in mammals. This work is essential for academic or special libraries supporting zoology or conservation and for large public libraries.

(*American Reference Books Annual*)

As were many of our colleagues, we were waiting for this revised edition since 2003... We can say that the wait was worth it.

(Sergio Solari and Robert J. Baker *Journal of Mammalogy*)

About the Author

**Don E. Wilson** is the curator of mammals and a senior scientist at the Smithsonian Institution. **DeeAnn M. Reeder** is an assistant professor of biology at Bucknell University.

## Users Review

### From reader reviews:

#### Melanie Pemberton:

Book is usually written, printed, or outlined for everything. You can recognize everything you want by a e-book. Book has a different type. As you may know that book is important matter to bring us around the world. Next to that you can your reading ability was fluently. A reserve Mammal Species of the World : A Taxonomic and Geographic Reference, 2-volume set will make you to become smarter. You can feel much more confidence if you can know about every little thing. But some of you think that open or reading a book make you bored. It is far from make you fun. Why they might be thought like that? Have you trying to find best book or suitable book with you?

#### Cheryl Estrella:

The actual book Mammal Species of the World : A Taxonomic and Geographic Reference, 2-volume set will bring that you the new experience of reading a book. The author style to elucidate the idea is very unique. Should you try to find new book to study, this book very suitable to you. The book Mammal Species of the World : A Taxonomic and Geographic Reference, 2-volume set is much recommended to you to learn. You can also get the e-book from the official web site, so you can quicker to read the book.

#### Madeline Edwards:

Precisely why? Because this Mammal Species of the World : A Taxonomic and Geographic Reference, 2-volume set is an unordinary book that the inside of the book waiting for you to snap this but latter it will zap you with the secret the item inside. Reading this book alongside it was fantastic author who write the book in such awesome way makes the content on the inside easier to understand, entertaining way but still convey

the meaning entirely. So , it is good for you for not hesitating having this nowadays or you going to regret it. This book will give you a lot of advantages than the other book have got such as help improving your proficiency and your critical thinking method. So , still want to hold off having that book? If I have been you I will go to the guide store hurriedly.

**Diane Sanchez:**

In this era which is the greater individual or who has ability in doing something more are more important than other. Do you want to become considered one of it? It is just simple solution to have that. What you should do is just spending your time little but quite enough to get a look at some books. On the list of books in the top list in your reading list will be Mammal Species of the World : A Taxonomic and Geographic Reference, 2-volume set. This book that is qualified as The Hungry Hills can get you closer in growing to be precious person. By looking upward and review this publication you can get many advantages.
