## **Editorial Review**

From the Back Cover

Transdisciplinary research (TR) is an emerging field of research in the knowledge society. It relates science and policy in addressing issues such as:

- global and local environmental concerns
- migration
- new technologies
- public health
- socio-cultural change

This handbook provides, for the first time, a structured overview of the manifold experiences gained in these fields. Twenty-one projects from all over the world present their research approaches, structured along the three phases of a TR project:

- problem structuring
- problem investigation
- bringing results to fruition

Referring to these projects, cross-cutting challenges of TR are discussed, such as:

- integration
- participation
- values and uncertainties
- learning from case studies
- management
- education

A systematic positioning of transdisciplinary research in the development of sciences and humanities, and 15 propositions for enhancing transdisciplinary research situate the contributions in a larger, systematised context. The handbook gives researchers and students an overview of the state of the art in transdisciplinary research.

### *Audience*

Written for students, researchers, and project managers who are planning or are involved in problem-driven, transdisciplinary projects, or are working on the interface of science, society and politics.
